LONDON:

PRINTED FOR THE ZOOLOGICAL SOCIETY
SOLD AT THEIR HOUSE IN REGENT'S PARK
MCMXXXIV.

Papers and Memoirs intended for this work should be addressed to "THE EDITOR of the Zoological Record, Zoological Society, Regent's Park, London, N.W. 8." It is earnestly requested that in the case of separately-printed copies of papers so forwarded, the *original pagination* may be indicated.

PREFACE.

THE seventieth Volume of the Zoological Record will be ready for distribution in November. The various parts have already been issued separately between June and October.

The present Volume contains 1,278 pages of Record matter; this is twenty pages more than that of the previous year. The number of new genera indexed is 2,087, an increase of 97 on that of the previous year.

There has been no change among the Recorders since the previous issue of the Record.

As in the last two years, a short supplementary list of Journals recently instituted has been added to the List of New Genera. A new edition of the "World List of Scientific Periodicals" was published last July, and it is hoped to issue a new and revised list of "Titles of Journals" conforming to the new World List in the next volume of the Record.

The thanks of the Zoological Record Committee are again due to Dr. W. T. Calman, Mr. J. R. Norman, and Mr. J. R. le B. Tomlin

for assistance in reading proofs of those Records in regard to which they have had special knowledge, and to Mr. H. G. K. Molineux for a number of obscure references to papers in Russian periodicals.

The accounts of the "Record Fund," here appended, show a further slight increased balance—a most satisfactory position.

EXPLANATORY.

This Volume is printed in the Divisions enumerated on p. vii.

The pagination of each Division is separate, and is given at the top corner of the pages. The number and name of the Division is given as a heading on each page. The date 1933 corresponding to the bulk of the literature indexed is given at the top of each page.

In the Subject Index of each Division authors are quoted by name only. The full references will be found in the Title Section of the Division.

The Literature indexed is mainly that of 1933 but includes entries for earlier years that have been received too late for inclusion in previous volumes.

I. COMPREHENSIVE ZOOLOGY

ARRANGED BY

W. L. SCLATER, M.A.

This section includes works that deal with more than one branch of Zoology, or that are of general interest to Zoologists. It is, therefore, not complete in itself as regards any one subject included in it. The special records complete each subject. A few memoirs included in the special records are repeated in this division as well as the literature on the Genetics of *Drosophila* and some other insects used as a vehicle for these special researches.

THE IMPERIAL INSTITUTE OF ENTOMOLOGY

FOREWORD

THE attention of readers is directed to the fact that owing to the necessity of keeping the "Insecta" part within reasonable limits, entomological papers written entirely from an economic standpoint are omitted, but abstracts of these will be found in the *Review of Applied Entomology*. Very brief systematic papers, usually those dealing only with a single species, are noticed in the systematic portion only and do not appear in the list of titles.
